

# Template Week 5 – Operating Systems

Student number: 590620

## Assignment 5.1: Unix-like

- a) Find out what the difference is between UNIX and unix-like operating systems?

UNIX is een officieel gecertificeerd besturingssysteem en unix-like systemen gedragen zich als UNIX maar zijn niet officieel gecertificeerd

- b) Study the image above named UNIX timeline. Find out who Ken Thompson, Dennis Ritchie, Bill Joy, Richard Stallman, and Linus Torvalds are and what they have contributed to the development of UNIX or unix-like systems and to IT in general. **TIP!** English-language sources often contain more detailed information about these individuals.

Ken Thompson

- ontwikkelaar van UNIX
- maakte de basis voor moderne besturingssystemen

Dennis Ritchie

- ontwikkelaar van UNIX
- ontwikkelaar van de C-programmeertaal
- Maakte UNIX draagbaar naar verschillende hardware

Bill Joy

- Belangrijke ontwikkelaar van BSD UNIX
- Maker van tools zoals vi
- Mede oprichter van Sun Microsystems

Richard Stallman

- Oprichter van het GNU-project
- Pleitbezorger van vrije software
- Ontwikkelaar van de GPL-licentie

Linus Torvalds

- Ontwikkelaar van de Linux-kernel
- Linux vormt samen met GNU-tools een volledig OS
- Maker van Git

- c) What is the philosophy of the GNU movement?

Dat software vrij moet zijn zodat gebruikers volledige controle hebben over wat ze gebruiken.

- d) Does Ubuntu as a Linux operating system conform to the philosophy of the GNU movement?  
Please explain your answer.

Ubuntu volgt de filosofie niet volledig. Het is gebaseerd op Linux en gebruikt veel GNU-tools en open-source software, en is vrij beschikbaar. Toch bevat het soms gesloten software en drivers.

- e) Find out what is the Windows Subsystem for Linux?

Subsystem for Linux is een functie in Windows waarmee je Linux distros kunt draaien binnen Windows

- f) Find out, which operating system family belongs to Android, iOS and ChromeOS?

Android: Linux (Unix-like)

iOS: UNIX (BSD)

ChromeOS: Linux (Unix-like)

### Assignment 5.2: Supercomputers and gameconsoles

- a) Research on this site what supercomputers are used for and write a short summary of it:  
<https://www.computerhistory.org/timeline/search/?q=Supercomputer>

Supercomputers worden gebruikt voor complexe berekeningen die gewone computers niet aankunnen. Ze worden vooral gebruikt bij wetenschappelijk onderzoek, simuleren van natuurkundige processen, weer en klimaatvoorspellingen en ruimtevaartonderzoek

- b) IBM is a company that has already built a number of supercomputers. One of them is IBM's Roadrunner. The CPU developed for this supercomputer was further developed at a later stage as the CPU for the PlayStation 3 console. Find out what a **PlayStation 3 cluster** is and what it was used for?

Een PlayStation 3 cluster is een groep met PS3-consoles die aan elkaar gekoppeld zijn om samen te rekenen als een supercomputer. Het werd gebruikt voor wetenschappelijk onderzoek, zoals natuurkundige simulaties medische berekeningen en militaire analyses

- c) You can build a supercomputer by putting a few computers together in a cluster. Here's what Oracle did with a collection of Raspberry Pi's, for example:  
<https://blogs.oracle.com/developers/post/building-the-worlds-largest-raspberry-pi-cluster>  
What specific operating system is running on this cluster?
- d) Oracle Linux for ARM
- e) Does Oracle's Raspberry Pi supercomputer appear in the list of the 500 fastest supercomputers in the world? Make a logical decision for this, without going through the entire list.  
<https://www.top500.org/lists/top500/list/2023/06/>

Waarschijnlijk niet want een Raspberry Pi is zelf niet heel krachtig.

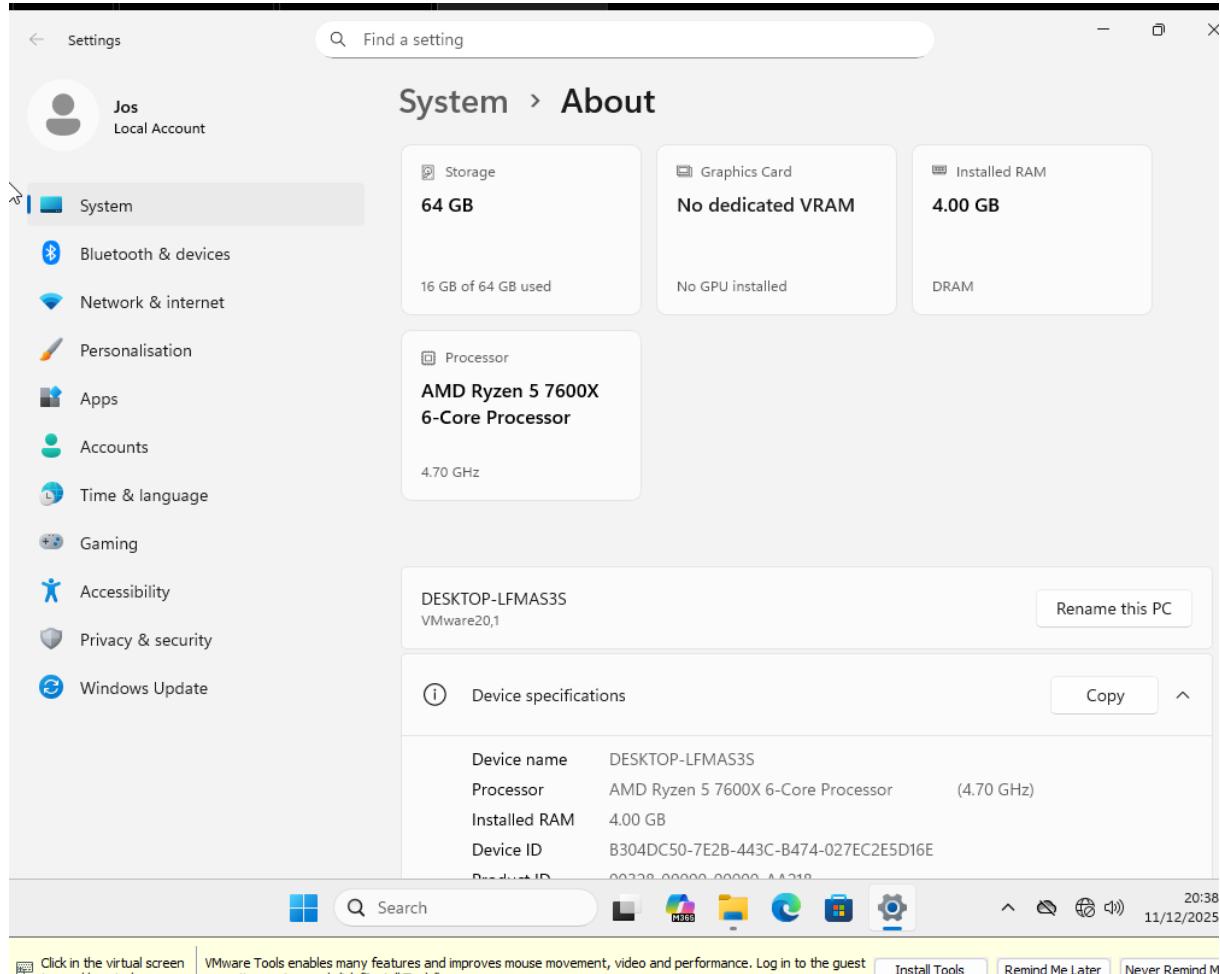

- f) What CPU architecture is used for the PlayStation 5 and Xbox Series X?  
Beide consoles gebruiken x86-64  
What operating systems run on these consoles?  
PlayStation 5 gebruikt Orbis OS (gebaseerd op FreeBSD/Unix)  
Xbox Series X gebruikt een Aangepaste Windows-kernel  
What conclusion can you draw from the answer to the previous question?  
Wat ik zie is dat je met de dezelfde CPU architectuur andere Besturingssystemen kan gebruiken.

## Assignment 5.3: Working with Windows

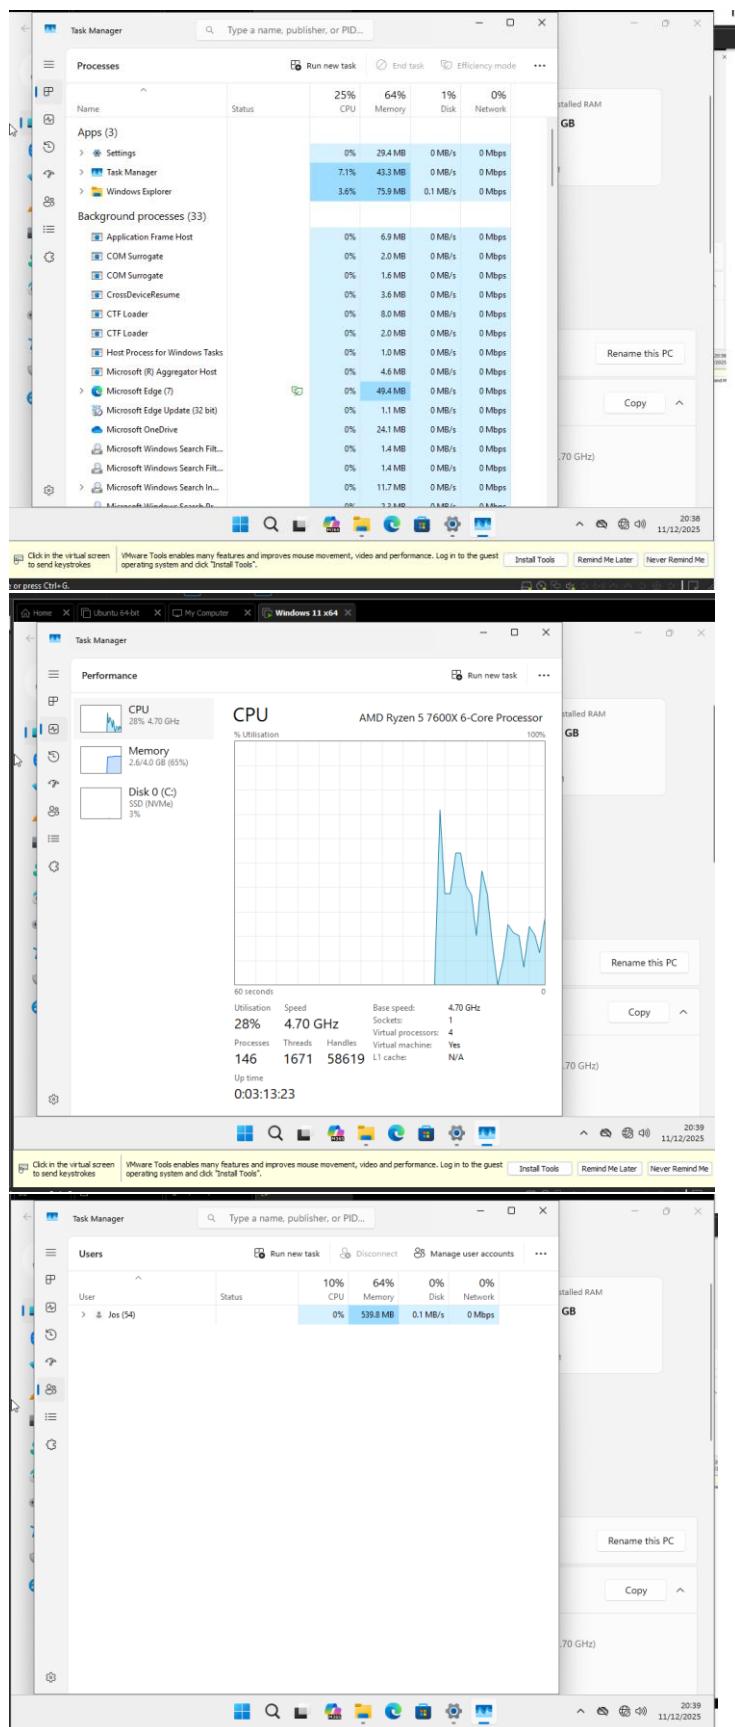

Take relevant screenshots of the assignments below

- Practice for about 10 minutes with the **Windows** keyboard shortcuts combinations, skip the general shortcuts in this exercise. Take a look at which screens are opened.
- The file explorer can be opened with **Windows + E**, Which key combination could you also use?
- Open the system properties with a **Windows** key combination, take a screenshot of the open screen. Paste this screenshot into this template.

I cant use the shortcut cuz of 75% keyboard

- Open task manager with a key combination. Take screenshots of the tabs: processes (shows active processes), performance, and users. Place these three screenshots in this template.

- e) If you're giving a PowerPoint presentation and you connect your laptop to a projector, Windows can use the projector as a second screen. For example, you may have Outlook open on your first

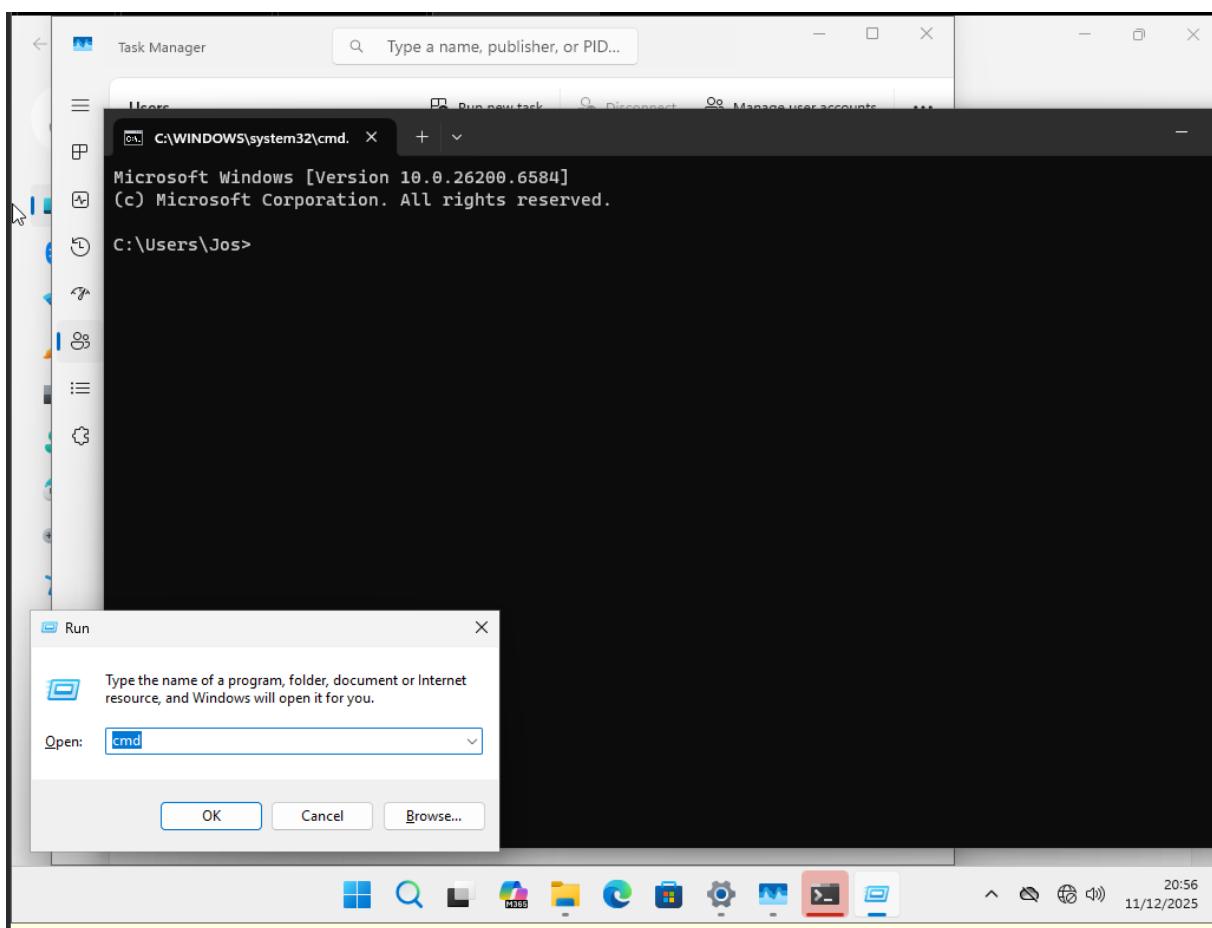

screen that you don't show over the projector, while the PowerPoint presentation is displayed on the projector, or the second screen. Which key combination should you use for this?

Je kan **Windows + P** om je scherm uit te bereiden naar 2 losse schermen dan kan je met **Windows + pijltje rechts** of **Windows + pijltje links** Outlook verlaatsen naar het 2de scherm

- f) If you leave the classroom for a while and you leave your laptop behind, it is wise to lock the screen. Your Apps will continue to run in the background. So, for example, if you're waiting for a download that takes a while, lock the screen and get a cup of coffee. Which key combination do you use for this?

**Windows + L**

- g) Open the Run screen with a key combination. On this screen, type CMD and press <enter>. Take a screenshot of this result and paste it into this template.

## Working in the File Explorer

Relevant screenshots **copy** command:

```
C:\Saxion>copy Wave.png "C:\Saxion\HBOICT\YEAR1\QUARTILE 1\Intro Programmeren"  
    1 file(s) copied.  
  
C:\Saxion>copy Plug.png "C:\Saxion\HBOICT\YEAR1\QUARTILE 1\Infrastructuren"  
    1 file(s) copied.  
  
C:\Saxion>copy Tumble.png "C:\Saxion\HBOICT\YEAR1\QUARTILE 1\ORG & IT"  
    1 file(s) copied.
```

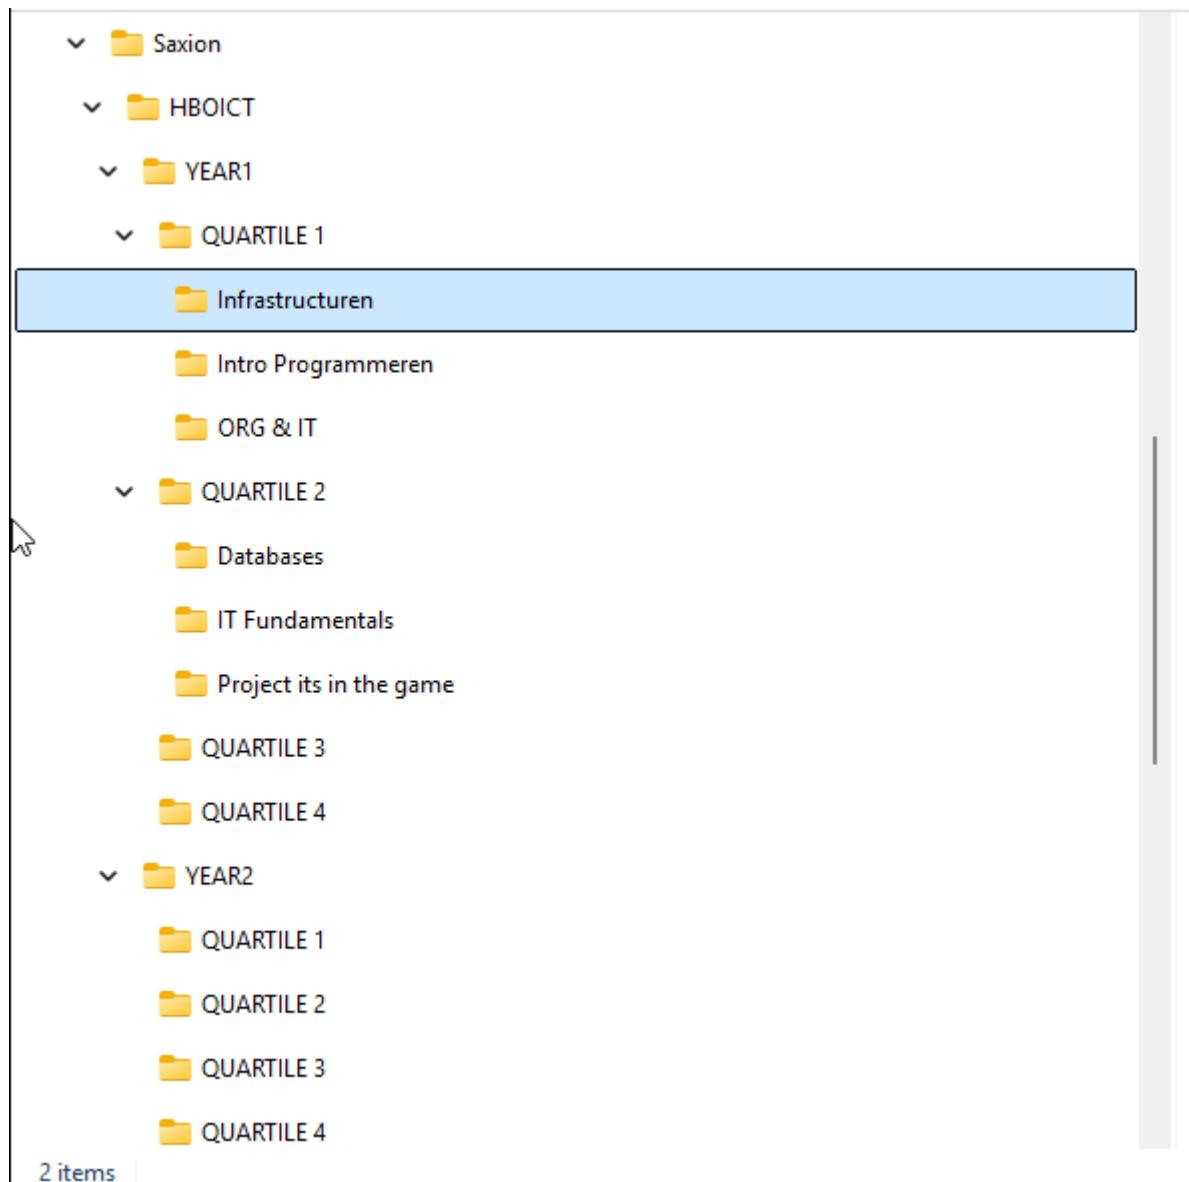

Relevant screenshots tree command:

```

## Assignment 5.4: Working with Linux

Relevant screenshots + motivation

```
jos@jos-VMware-Virtual-Platform:~$ cp text.txt ~/Documents/
```

```
jos@jos-VMware-Virtual-Platform:/etc$ cd ..  
jos@jos-VMware-Virtual-Platform:/$ $
```

Linux heeft een single root directory en windows heeft drive letters

/etc is voor system config files

tar -czf text.tar.gz text.txt

tar -xzf text.tar.gz

htop laat de runnende taken zien cpu en ram usage.

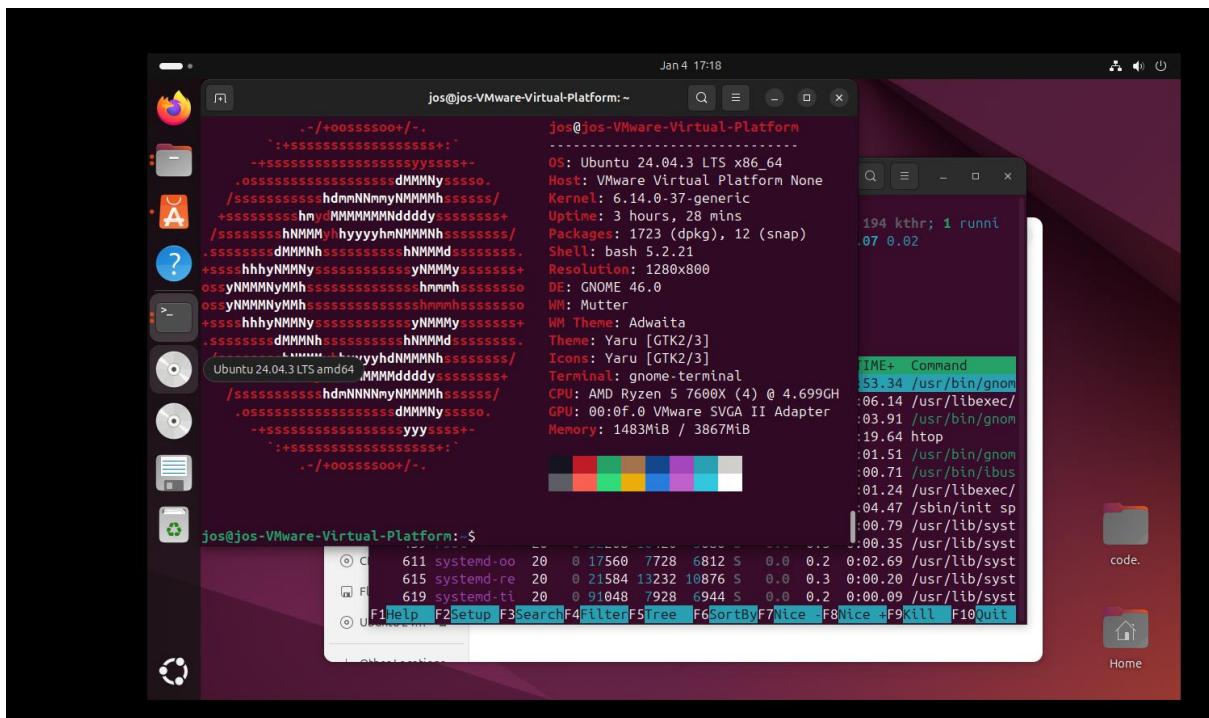

The screenshot shows the htop command running in a terminal window. At the top, there's a progress bar for memory usage: Mem[|||||1.08G/3.78G] and Swap[0K/3.78G]. Below the progress bar, the CPU usage is shown as 4.1% with tasks 107, 362 threads, and 1 running. The load average is 0.02, 0.01, 0.00. The uptime is 01:57:06. The main part of the screen is a table listing processes:

Main	I/O	PID	USER	PRI	NI	VIRT	RES	SHR	S	CPU%	MEM%	TIME+	Command
1534	jos	20	0	4307M	285M	123M	S	18.6	7.4	0:33.06	/usr/bin/gnom		
2450	jos	20	0	544M	56144	42628	S	10.3	1.4	0:02.74	/usr/libexec/		
4564	jos	20	0	3074M	63936	49280	S	4.1	1.6	0:00.36	gjs /usr/shar		
4784	jos	20	0	11296	5132	3756	R	3.4	0.1	0:01.70	htop		
1599	jos	-21	0	4307M	285M	123M	S	2.7	7.4	0:02.68	/usr/bin/gnom		
611	systemd-oo	20	0	17560	7728	6812	S	0.7	0.2	0:01.51	/usr/lib/syst
